

Promise of a Sustainable Future

Driven by a higher purpose, we make the world a better place to live in. At Avaada, working for the sustainable development of People and Planet is at the core of all our initiatives.

We are committed to delivering clean and sustainable energy across emerging Asian and African economies. We possess the expertise cultivated over years of building and operating some of the largest solar and wind projects. Avaada is now on the way to innovate and create new paradigms in Clean-tech.

The Sun, the wind and the world we live in

Sustainable energy is the future. We, at Avaada, know it well. With a ~5 GW renewable capacity pipeline in place, we were the first to build ~1 GW solar portfolio in India. Our track-record vouches for delivering path-breaking solar and wind power solutions in terms of technology, capacity, quality, execution speed and total cost of ownership. Our emphasis on systems and processes runs strong. This enables us to consistently improve our project delivery capabilities.

Setting high benchmarks. We adopt disruptive technologies and execute every project in sync with our social inclusion initiatives. As a team, we have built credibility both nationally and globally by delivering our projects within budgeted time and cost. We have also transformed the lives of local communities across 10 states in India.

We leverage on our experience. Our team has proven Engineering, Procurement & Construction (EPC) capabilities. Building complex solar and wind projects across diverse geographies is our speciality. Our renewable energy projects have been accredited and certified by international organisations. Marquee investors like GE, ADB (Asian Development Bank) and DEG of Germany had invested in our operations. Some of our largest solar power plants were 'Dedicated to the Nation' by the country's esteemed leaders.

Empowering the communities

Through Avaada, we intend to create a bright and sustainable future for the world. Our inclusive business model delivers growth not just for the organisation but for the society at large. Our projects are not merely profitable but also viable and sustainable for the environment. With every project, we work to empower the communities we touch. Creating opportunities for a better quality of life in rural communities through rural electrification, skill development, jobs opportunities, health-care and education are as much a priority for us as our business.
